

The following page contain examples of how data is presented during the Oahu data presentation public meetings (September 2009) and in data files available at this link. The number of fish of each specific weight are totaled and presented as a frequency histogram and a decimal fraction histogram plot to the right. Decimal fraction histogram plots are used throughout the data presentation for individual species and gear types.

# Size Grouping of Catch

## Example Fish Size Data

Size (lbs)	Bins (lbs)	Frequency fish per bin	Decimal percent
2	0	0	0.00
2	1	0	0.00
3	2	2	0.20
3	3	3	0.30
3	4	4	0.40
4	5	1	0.10
4	6	0	0.00
4			
4			
5	sum =	10	

## Example Plots
