DIRECTIONS

1. There should be **as little** time as possible between the time of making cuttings, treating with rooting powder and planting.
2. Cuttings should be **moistened** before treatment and then excess moisture shaken off. Do not wet "hairy" cuttings.
3. Dip basal ends of **cuttings** into Hormex Rooting Powder.
4. Shake off excess **powder** by tapping cuttings.
5. Plant treated **cuttings** in rooting media, being careful not to rub off rooting powder when planting.

Inhibition of root formation is possible by the use of too high a concentration of rooting powder. It is **essential** for successful propagation that the proper strength rooting powder for the **species** involved be chosen.
