**THE ACTIVITY OF HARD SURFACE DISINFECTANT WIPES AGAINST THE HIV-1 (AIDS VIRUS)\*:**

**HARD SURFACE DISINFECTANT WIPES** completely inactivate the HIV-1 (AIDS VIRUS) on hard, non-porous surfaces when used at a contact time of 30 seconds at room temperature (20-25°C). Although efficacy at a 30-second contact time has been shown to be adequate against HIV-1, this time would not be sufficient for other organisms. Use a 20 minute contact time for disinfection against all of the organisms claimed on the label. **HARD SURFACE DISINFECTANT WIPES** kill HIV-1 on pretreated environmental surfaces/objects soiled with blood/body fluids, in healthcare settings or other settings in which there is an expected likelihood of soiling of inanimate surfaces/objects with blood or body fluids, and in which the surfaces/objects likely to be soiled with blood or body fluids can be associated with the potential for transmission of Human Immunodeficiency virus Type-1 (HIV-1) (associated with AIDS).

**SPECIAL INSTRUCTIONS FOR CLEANING AND DECONTAMINATION AGAINST HIV-1 ON SURFACES/OBJECTS SOILED WITH BLOOD/BODY FLUIDS:**

**Personal Protection:** Specific barrier protection items to be used when handling items soiled with blood or body fluids are disposable latex gloves, gowns, masks and eye coverings.

**Cleaning Procedure:** Blood and other body fluids must be thoroughly cleaned from surfaces and objects before application of **HARD SURFACE DISINFECTANT WIPES**

**Contact Time:** While the HIV-1 Virus is inactivated in 30 seconds, use the recommended contact time for disinfection of other organisms on this label.

**Disposal of Infectious Materials:** Materials that may contain blood and other body fluids must be autoclaved and disposed of according to federal, state and local regulations for infectious waste disposal.
