## NEW LAWN CRABGRASS PREVENTER PLUS SEED STARTER FERTILIZER

READ THE ENTIRE LABEL BEFORE USING THIS PRODUCT. USE ONLY ACCORDING TO LABEL INSTRUCTIONS.

Before buying this product, read the Warranty Section elsewhere on this label. If terms are not acceptable, return the unopened container to the place of purchase at once.

### Directions for Use

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Not for use on turf being grown for sale or other commercial use as sod, or for commercial seed production or for research purposes.

Preen New Lawn Crabgrass Preventer Plus Seed Starter Fertilizer fertilizes grass and controls crabgrass before it emerges as an unsightly lawn weed. Can be used on newly-seeded areas. It will not harm germination of grass seed.

For use on newly-seeded or established plantings of the following grasses:

Bluegrass	Redtop	Perennial Ryegrass	Zoysiagrass
Fescue	Smooth Brome	Orchardgrass	

Bentgrass Strains as follows:

Penncross	Highland	Nimisiia
Seaside	Astoria	C-1, C-7 and C-19

Do not use on other bentgrass strains or bermudagrass.

### Application Instructions

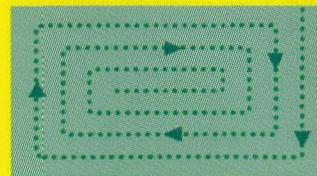

1. Flake the lawn to remove leaves and other debris.
2. **On Established Lawns:** Apply at the rate of 5 lbs. per 1,000 sq. ft. (15 lb. bag covers 3,000 sq. ft.). Apply after the 1st or 2nd mowing (usually at the time forsythia blossoms start to fall) in the Spring before crabgrass and other annual grass weeds emerge.
3. **On Newly-Seeded Areas:** Apply at the rate of 2 1/2 lbs. per 1,000 sq. ft. (15 lb. bag covers 6,000 sq. ft.). Apply immediately after seeding in early Spring before crabgrass and other annual weeds emerge.
4. Apply with a fertilizer spreader (see settings on right) to insure even coverage.
5. If it does not rain for three days after application, water the treated area thoroughly to get desired results. Timing application just ahead of a predicted rain is ideal.

### Spreader Settings

Spreader settings below are approximate. Check your spreader on 100 sq. ft. and adjust to apply 4 oz. at 2 1/2 lb. setting, 8 oz. at 5 lb. setting. Rate of walk, moisture and spreader condition can vary the spreader setting necessary to apply the correct amount.

NOTE: Supplemental applications of lawn fertilizer are needed to achieve a minimum 1 lb. nitrogen per 1,000 sq. ft.
